

Clinical Toxicology User Survey 2024

About You

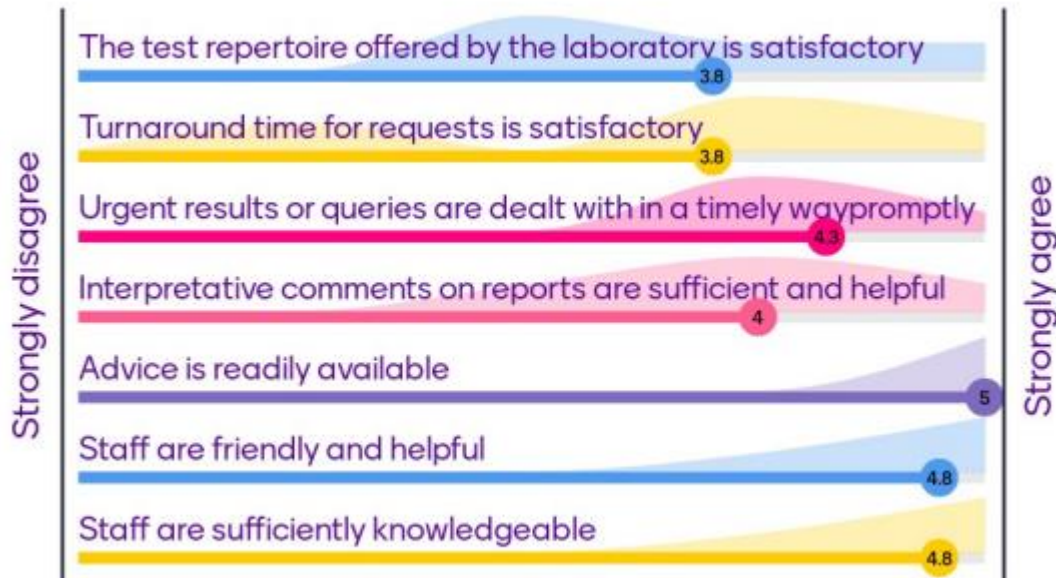

Five responses were received from users encompassing a variety of staff who use the Clinical Toxicology service.

Please indicate which of our services you use:

Drugs of abuse screening is the service use the most by our respondents.

Please tell us whether you agree or disagree with the following statements:

Buprenorphine isn't currently included in the urine drug screen. 1000 patients prescribed it as OST in Bristol and commonly abused by others.

I think we should have point of contact testing available as current drug testing is only twice weekly. I also think we should explore other alcohol testing methods with more validity than CDT

It is useful to receive feedback on our test repertoire and this helps to inform future service developments. If you would like to discuss specific developments directly, please get in touch.

If suspected error in [iohexol GFR] procedure, it would be helpful to have a bit more info to feedback to the nursing staff who do the GFR...

Sometimes values can fall outside of expected ranges that suggest that results may be unreliable. We may highlight this on the report, but it is not always possible to say what the cause is.

Where there are specific errors, for example discrepancies in the sample labelling or timings, we will note this on the report

Do you find the Severn Pathology website easy to navigate?

Four very positive responses with one comment about how good they thought the website. We are always trying to promote our website in as many ways as we can. If you have any ideas, please get in contact with us.

I didn't know there was such a good website until I just looked to answer the question. I'm not sure how it can be promoted but I think that would be a good idea.
